

**ENJOY PERFECT  
MINERAL WATER  
ON TAP**

***OASIS DP RO REVERSE OSMOSIS FILTERS***

# IT'S OUT WITH THE BAD AND IN WITH THE GOOD

Did you know that pure, filtered water isn't actually that good for you? That's because when you filter out the bad stuff, you're taking away most of the good stuff too.

Water contains natural elements and minerals that are essential for good health. So how do you ensure that your drinking water tastes great, but still gives you all the nutrients you need? Problem solved with Oasis DP RO, The reverse osmosis filters for problem water.

**Like a mountain spring under the kitchen bench.**

Available as standard or booster pump versions for low pressure areas, Oasis filters use multi-stage purification, reverse osmosis and a special remineralisation process to create delicious, perfectly balanced water.

First, the water is triple-filtered to eliminate impurities, pollutants, odours and flavours. Then, it passes through the reverse osmosis membrane to remove almost all contaminants, including dissolved substances, like fluoride and nitrates. Finally, the water is 'polished' with granular activated carbon. Then it's remineralised, replacing and rebalancing essential elements, including calcium and magnesium.

The result is water that tastes as if it had been filtered through mountain rock for thousands of years.
